

# AR PAL<sup>®</sup>

## ADJUSTABLE PALLET RACKING

- ▶ The AR PAL Adjustable Pallet Racking (APR), or selective racking, is a highly versatile system, accommodating the use of any kind of unit load or fork lift truck. It allows immediate access to all unit loads and SKUs stored. It is particularly easy to assemble and disassemble, and to replace and add components.

Load bearing capacities of the AR PAL system are based on both the European regulations in force and FEM (European Federation of Materials Handling) recommendations.
