

## AUTOMATED SYSTEM FOR PALLETS

- ▶ Automated pallet storage systems use ASRS for handling loads. This is a fast and high-density system as a result of a reduction of operating aisles, allowing shortened response times. Reliability facilitates immediate inventory of stored products and minimises errors when handling unit loads.

Automated pallet systems can be:

- Single- or Double-deep
  - Shuttle operated
- 
- ▶ LEVERAGED FLOOR AREA
  - ▶ INCREASED UNIT LOAD DENSITY BY SURFACE
  - ▶ PRECISE HANDLING OF LOADS
  - ▶ INCREASED PRODUCTIVITY
  - ▶ HIGH RELIABILITY AND STOCK CONTROL
