

AR SHUTTLE®

COMPACT & SEMI-AUTOMATED STORAGE SOLUTION

▶ **AR SHUTTLE** is a semi-automated, compact pallet storage solution using **battery-powered shuttles** which carry out all handling operations inside the rack.

AR SHUTTLE is designed to **maximise the floor space** and height available while minimising the working aisles for trucks. No need for operators to walk through the aisles means **workers' safety is increased** when handling pallets. Collisions are avoided inside the racking structure, reducing both maintenance costs and number of issues.

AR SHUTTLE allows for **automatic control** of inventory by using sensors to count the number of pallets stored.
